## Introduction:

The introduction of a new academic program or amendment to the academic program is an ongoing process vehicle contains a lot of influential elements that must be taken into account.

Perhaps the most important of these elements are added scientific value and quality that can be added by this program to the community, labor and the environment that surrounds it. Since the interaction program outputs of staff with high professional and scientific expertise with a mature ,shows us the importance of this and the importance of refined it, and put it among the priorities of the program to be introduced.
Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

When the affecting elements are available as plan study which is well-studied and the corresponding national standards, global availability of teaching staff qualification with necessary specializations, the study of the labor market, the provision of educational resources and learning different, all these contributes a significant contribution in building the academic program has the ability to achieve the desired objectives.

Like any academic program aspires to improve and see its reflection on the educational process ,must be put a clear strategy for self-assessment through quality standards for all elements of the program of teaching, tests, plan of study, characterization of the courses and management education to the other, as a total evaluation and continuously aims to use the feedback to the development and improvement.

It must be based on the program that they have a clear vision and strategy for future development, a series dealing with variables, events and interact with them ,in order to change and amendment of construction to serve the axis of the academic process and improves output
The request for the creation or modification academic program, which is available in your hands now aims to organize and inventory data should provide for the development of the academic program and the completion of its elements. Where he was working on the request to divide the ten main parts :
Part I: definition of the academic program
Part II : the importance of the program
Part III : Relationship of the program with other programs within the department and faculty
Part IV : The syllabus of the program
Part V : characterization of the program and description of courses
Part VI : Hardware implementation of the program
Part VII : tools and sources of teaching and learning
Part VIII : Strategic Plan for the Future program
Part IX : quality requirements
Part X: Approval of the program

Majmaah University<br>Vice President for Educational Affairs<br>The Standing Committee of the plans and the studing system

## Excellency:

## Topic: request to amend the academic program

Enclose your request to amend the academic program in accordance with the following basic information:

## Program Name: Study Plan for the Bachelor of Science Degree specialization (mathematics)

Program code:
(MATH)
Department Name:
(Mathematics)
College: $\qquad$ (College of Science, Zulfi)
Region: -------------- (Riyadh) $\qquad$ government: --------- , (Zulfi)

## Applicant Information

Applicant Name: dr. Mohammed Saleh Aboudy Academic department: Mathematics
Degree Academic : Doctorate Professional rank: Assistant Professor
Administrative Classification: Dean of the College Mobile: 0504892443
E-mail: al-aboodi@hotmail.com
Note that the information contained in the application have been discussed in the department council session No. (10) dated 06/12/1434 AH and was recommended by the College Council to amend the academic program, which in turn passed the approval of the (modified) department in its meeting No. (22) on 19 / 6/4143 and its attachments is true and sound and it sign. Signature of Applicant:

Well .. do not fill in the information below
The present application for:
Ranked administrative:
Dated: / / 143, corresponding to: / / 201 Recipient name :
signature: $\qquad$

## Guide pilot

Introducation
The development of an application or amend an academic program is a rigorous process requires the mobilization of multiple information and correct. So we hope that Your Excellency read carefully the terms of the form and fill out the information accurately. We also hope dimension for verbosity unjustified and crowbar abbreviation for information.

So before starting to fill out the form we hope to collect the necessary information that will help you complete this application with ease and accuracy, including

1 - information relating to the program's objectives, vision and plans for the future
2 - software components and infrastructure
3 - teaching staff and administrative
4 - Study Plan and components
5 - Study the feasibility of developing the program or modify it (the justification for the construction and its impact on society and economic areas of the department's graduates)

## Terms of submission of the application:

1 - Fill out the information in the attached forms complete. In the case of not being able to fill in certain information be contacted by the Vice President for Educational Affairs - management programs and study plans (T / 064041 055, P / 064041 066) to ask for help. 2 - attach all the documents and data required to be submitted with the application.

3 - Information to be included precise and clear.
4 - is fill out the application electronically and then printed and signed and delivered by hand according to the instructions attached

## Attachments:

1 - Model program specification (Model A)
2 - Model approve of the study plans and programs
3 - Sample study plan for the program (model b)( the requirements of the University ,College and department)
4 - Summary of model characterization of the courses for the study plan (Form C)
5 - Model of characterization of the courses of the study plan
(Form D)
6 - Model kits infrastructure of academic program (Form H)
7 - Model needs of academic staff, technical and administrative (model y)
8 - The recommendation of the the department and approval of the College to approve on the creation (modified program) \{image of the minutes of the meetings $\}$

## Note: The information in the attachments are provided with the application and processing of first supposed to help you fill out an application development of the program

Fill out mechanism of the application:
1 - fill out the application electronically
2 - application printing on one side clearly
3 - submit three copies of the application and one copy of attachments
4 - attach the attachments in the last request and referred to during the mobilization of the application in the box reserved

5 - If there are other attachments are attached and are also referred to dissuade fill out the application in the box reserved

## Note: If you do not fill out the application in accordance with the completion of the conditions will be back again and receive a new application.

At the beginning and before we prepare a model we would like to give a brief about the college

#### Abstract

About the College Issued royal approval precious establishment of the college of Science in Zulfi City on $5 / 8 / 1426$ ah to be another brick in the edifice of higher education and a part of the system of University City in Qassim , has begun to study at the college of Science in the academic year 1427/1428 AH, the college has four departments namely the department of mathematics, department of Computer and Information Sciences, the department of physics and department of Medical Laboratories in addition to the preparatory year for those departments .when has been issued royal approved precious for building University collected on 03/09/1430.The college of Science in Zulfi city was one of the colleges mentioned in the decission of the University of bundled, a basic science of Dentistry college is teaching at the college of science

A new students in the college of Science in the preparatory year program for a period of one academic year, and this year is a preparatory stage for students wishing to specialize in the various departments of the college and is calculated with the average GPA of the student. Designed to prepare students to receive academic education in spades and English language skills and train students on the skills of thinking and learning. The college offers the following degrees:
1 - Bachelor of Science degree in Mathematics
2 - Bachelor of Science Degree in Physics

3 - Bachelor of Science degree in Computer Science
4 - Bachelor of Science degree in medical laboratory

## Vision College

1 - scientific leadership and research in the disciplines of the college and community service and rehabilitation of students commensurate with the professional requirements of modern science.
2 - Steering wheel development and the achievement of excellence and quality educationally, professionally and academically in light of the information society and knowledge economy.
3 - to achieve leadership and excellence in building a knowledge society , educational humanities, applied through academic programs and scientific different departments which enable it to be a reference, and provide comprehensive professional consultancy of Saudi society in accordance with the standards of quality and academic accreditation recognized locally and globally

## Mission of the college

Autocratic character of distinguished scientific through study plans meet the requirements of the accreditation of academic standards and the labor market to provide an academic environment conducive, learning and research faculty members, and provide knowledge services to the community.
Focus on creativity, self-development and production of innovative research serves higher education by providing a learning environment, and take educational quality standards applied in international universities

## Goles of the College

1 - To provide an outstanding education in an integrated learning environment to contribute in the preparation and training of human resources to qualify academically, culturally and professionally carry out their tasks in the various disciplines of the college to serve the community.
Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

2 - development of scientific research, authoring and translation in the various disciplines of the college.
3 - building a genuine partnership with the community.
4 - continuous improvement of the organization of academic and administrative faculty.
5 - sophistication of student activities and training to acquire the necessary knowledge and skills.

## Admission Procedures in the college

In order to accept new student at the university the following: -
1 - Be holds a high school diploma or its equivalent from within or from outside the KSA
2 - Should not have been on the receiving a high school its equivalent for more than five years, may be the exception to the University Council if there is compelling reasons.
3 - to be of good behavior
4 - to successfully pass any test or an interview seen by the University Council.
5 - to be medically fit
6 - to get approval from the study attributed if it works in any government or private.
7 - to satisfy any other conditions determined by the university at the time of submission.
8 - not to be dismissed from another university for disciplinary reasons or educational, and if it turns out after accepting his dismissal shall be deemed to have been previously canceled from the date of acceptance of acceptance.
9 - may be admitted student dismissed from the university for educational reasons in some programs that do not grant bachelor's degree, according to the decision of the University Council or his representative, and may not be in the transitional program
10 - It is not permitted to accept those with a bachelor's degree or
its equivalent for the last Bachelor, and manager of the University of exception that 11 - It is not permitted to accept a student registered for a university degree and the other without, both in the same university or the other.

## About the Department of Mathematics

Department was founded in 1427 coincided with the establishment of the college ,it has developed rapidly over the past few years with increasing of faculty members, also with the increasing number of students in the department. The department teaches math courses for the students of the department of Mathematics and all students of other departments in the college and other colleges of the university

## Requirements for admission to the program: -

1 - The student must have fulfilled all the requirements to attend with the college
2 - the wishes of the student.
3 - The grade point averge for the student in the preparatory year.
4 - General capasity of the Department

## Requirements for obtaining a bachelor's degree

Faculty of Science student spends four years spread over eight semesters and the student must successfully pass (137) credit hours for a bachelor's degree, distributed as follows :
1 - |The completion of the mandatory requirements of the university successfully (12 credit hours).
2 - The completion of the mandatory requirements of the college successfully ( 29 credit hours .
3 - The completion of the mandatory requirements of the
department ( compulsory + Optional) successfully (94 credit hours).
4 - completed a free course successfully (2 credit hours).
5 - the completion of field training in one of the government or private.
6 - the completion of all required courses with grade point averge for at least (2.0) .

## Code indication of mathematics courses

(0) calculus and statistics
(1) Applied mathematics
(2) Differential equations
(3) Basics and mathematical logic
(4) Algebra
(5) Namurical analysis and programming
(7) Gemotery and topology
(8) Analysis
(9) Project

## Model modified academic program

## First: the definition of the program (Model B)

| 1- The name of the proposed <br> program and symbol and <br> number | MATH | 2- College <br> Name |  | College of <br> Science |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3- Qualification granted by the <br> program(degree) | Bachelor | 4- Total cridate hours | 137 |  |  |
| 5- Region | Riyadh | 6-government | 7-City | Zulfi |  |

8-Start date program (Creator or average):
Date 24-8-1433

Fill out the information in item 9 and 10 for the cointinuous and modfied program
1- If the programis continuous, what is the length of time that has been in use modified program?

Four years

College of Science in Zulfi- Mathematics

Departments

11- What is the name and classification of the person responsible for the program?

Dr.Mhammed Saleh El-abodi Dean of College osf Science in Zulfi

## Second: the importance of the program

## 1-The objective of the program amendment

1- in order to compatible with preparatory year
2 - keep up with developments in the corresponding programs
3 - delete duplicate some courses
4 - Add some modern courses in accordance with the progress in the field of mathematics
5 - to revise and update some courses

## 2-Vision the program

The mathematics department looks to be a leader at the local, regional and international levels in the areas of education and research by contributing to study the problems and conduct scientific research, And find appropriate solutions to be linked to the research community, while preserving the environment.

## 3 - Program mission

The provision of educational and research service for the distinct phases of bachelor's and master's degree in mathematics allowing them the opportunity to education capable to compete in the era of globalization to meet the needs of the community while maintaining Islamic values.

## 4-Program goals

The aim of the mathematics department under the overall goals of the College of Science and objectives of the mathematics department to the following
1 - Preparation of qualified staff to contribute to the service of development and the comprehensive development witnessed by the Kingdom in all fields of life.

2 - positions of specialization in any place of public and private sectors.
3 - promoting scientific research in the field of mathematics, statistics and conduct scientific research to find appropriate solutions and participate in national and international conferences.
4 - working in information technology and data analysis to contribute in the preparation of strategic plans.

## 1-Justification Modification Program

1- For compatibility with the preparatory year which is approved by the university on the students 2 -Modiving courses in terms of hours and elective courses
3 - Do not keep up with some of the old program of courses for those in the corresponding programs
4 - there are some duplicate courses
5 - Rehabilitation Program for Academic Accreditation

## 2-The expected needed of the labor market for graduates of this department $\sqrt{ } \square$ Urgent task $\square$ important $\quad \square$ Good Normal

## 3-Output is expected gain its graduates after completion this program

1- Qualified staff to contribute to the service of development and the comprehensive development witnessed by the Kingdom in various spheres of life .

2- positions specialization in any place of public and private sectors .
Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

3- promoting scientific research in the field of mathematics and the study of mathematical and statistical problems and conduct scientific research to find appropriate solutions and participation in national and international conferences
4- abreast of the developments that occur in the field of Mathematics and Statistics
5-Contributing to find constructive solutions to the issues related to the field of mathematics in science difference

## 4-The expected learning outcomes of the program

A - Knowledge:
1 - The student learns the deductive nature of mathematics, and the role of definitions, axioms and theorems to form an effective discusion

2 - The student learns the theories and applications of other mathematics fields .
3 - The student learns to numerical mathematics and the different methods in which they are used numerical information .
4 - The student learns the algebraic relations and their role in solving the problems expressed in the form of a symbolic and in the development of mathematical theories .

5 - The student determines the technical and mathematical methods that deal with differential equations and their applications .
6 - The Ivkraltalib engineering concepts and methods of measurement recipes stuff.
7 - The student determines the methods of calculation and capacity of multiple pure mathematics to solve a specific problem numerically without resorting to direct count

## B- Cognitive skills :

1 - The ability to put ideas and mathematical methods in the form of equations using the vocabulary and the appropriate mathematical symbols .

2 - The ability to encode problems in the mathematical form and put it in the model .
Development and use the models for the evaluation and decision-making .
3 - Ability to view, summarize and analyze problems .

[^0]4 - The ability to develop the relationship between the different branches of mathematics and other sciences .

5 - Ability to use appropriate means to study applied mathematics .
6 - To judge the accuracy of the mathematical methods and the suitability of the results.
7 -To determine the student the credibility of the mathematics discussions and the reasonableness the results

## C - Interpersonal skills and responsibility:

1 - gining skills of personal success and factors to ensure career success.
2 - The study and understanding the issues, the ethical and professional responsibilities, , security, legal and societal associated with specialization.
3 - To acquire and develop teamwork skills.
4 - To acquire the skill of self-reliance and self-learning ability

## D - Communication skills, information technology and numerical skills :

1 - The use of modern technology in the presentation and report writing .
2 - Ability to demonstrate effective time management and employment has correctly.
3 - To deal with a wide range of modern technological devices .
4 - The use of modern techniques in communicating with others and fruitful cooperation with them in a professional manner .

5 - Discover how to use the technology in the exploration and creation of new ideas, identify trends, and forecasting .
6 - Gain fluency in foreign languages and tha solutions based on the mathematics
7 - To discuss positive trends towards the use of technology , as well as the responsible use of information.

8 - The application of modern technology, and the statement of its efficet on civic participation, democratic processes, and the environment.

9-Using the basics of statistical methods and a mathematical techniques in the study field

## E - psycho-motor skills

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

| No |  |
| :--- | :--- |
| 9-link the program with the University's vision |  |
| 1- There is a close link between the University's vision and math program |  |
| where the vision of the university include excellence in education, |  |
| scientific research and community service in the field of mathematics |  |

## Third: The relationship program with other programs within the department and the college: (model B + C model)

1 - What are the programs that are taught in the department or college and related with the modified program

| Program name |  | Belonging to the department or college | The number and percentage of common <br> hours |
| :---: | :---: | :---: | :---: |
| 1 | No | No | No |

2 - What is the expected learning outcomes of the programs (according to the National Commission for Academic Accreditation and Evaluation)

Should be obtaining a bachelor's degree in science in mathematics have proved the following:

1- a comprehensive set of knowledge and a consistent organization of knowledge in the field of mathematics, theories and principles related field.
2 - Ability to search in complex problems and finding innovative solutions

[^1]under a limited amount of guidance, using the insights of their field of study of mathematics and other areas of the relationship.
3 - The ability to identify and use mathematical methods, appropriate statistical analysis, to find solutions to complex issues, and the ability to select and use the most appropriate mechanisms for the delivery of results to different recipients.
4 - leadership ability and willingness to fully cooperate with others in projects and joint initiatives.
5 - acquiring a deep knowledge and understanding of a comprehensive literature research in the area of specialization, in addition to the ability to interpret a, analyze and evaluate the importance of such research to increase knowledge in the field of study.

3- What are the proportions of the completion of the study plan for the program by the university and the college and the department?

| Authority | Completion rate (\%) | credit hours |
| :---: | :---: | :---: |
| University | $\% 8.75$ | 12 |
| College | $\% 21.17$ | 29 |
| Departme <br> nts | $72.99 \%$ | 94 |
| Others <br> Free | $1.45 \%$ | 2 |
| Total | 100 | 137 |

4-What is the ratio of the completion of the courses in the other departments of the program (\%): $\square \sqrt{ } 5 \square 10 \square 15 \square 20 \square 25 \square 30 \square 35 \square$ other (Mention)

1- What are the tracks or specializations available in the program:
Mathematics

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

## Fourth: Study Plan for the program: (model c)

Compulsory and optional requrements

| Request | Request type | Total Cridit hours | The presentage of total credit Hours | Note os |
| :---: | :---: | :---: | :---: | :---: |
| University | Compulsory | 12 | 8.75\% |  |
| College | Compulsory | 29 | 21.16\% |  |
|  | Compulsory | --------- | --------------- |  |
| $\begin{gathered} \text { Departme } \\ \text { nt } \end{gathered}$ | Compulsory | 84 | 61.31\% |  |
|  | optional | 10 | 7.29\% |  |
| Free Course |  | 2 | 1.45\% |  |
| All total credit hours and presentage |  | 137 | 100\% |  |

## University Requrements

| Course Code | Course Name | Units Distribution |  |  |  | Prerequisit <br> e | Notes |

## Module Description

Mathematical Logic - Mathematical Induction-Functions and their properties Sets and their properties-Relations and their properties - Representing relations - Equivalence relation-Groups and their properties-Rings and their properties - polynomials ring - Partial fractions-Field and their properties

## Module Aims

- Studying Introduction to Mathematical Logic- Methods of proofs
- learning Mathematical Induction and recognize the concepts of Set theoryThe product of a sets- Binary operations- Equivalence Relations - Equivalence Classes and Partitions - Mappings
- Learning the images and inverse images of a sets under mappings Equivalence Sets- Countable and finite sets
- Studying the concepts of Binary operations-homeomorphisms- Definition and examples of groups- definition and examples of rings and fields-PolynomialsPartial fractions.perties.

## Educational outcomes: (understanding, knowledge and mental skills and practical

## After this course supposed that the student is able to

The students recognize the Introduction to Mathematical Logic- Methods of proofs-Mathematical Induction- Set theory-The product of sets- Binary operations Equivalence Relations - Equivalence Classes and Partitions Mappings -The images and inverse images of a sets under mappings Equivalence Sets- Countable and finite sets. Binary operations-homeomorphisms- Definition and examples of groups- definition and examples of rings and fields-Polynomials-Partial fractions

## Model (5)

## Summary Course Description

| Course Name :(Calculus 1) | Corse Code: MATH201 |
| :---: | :---: |
| Prerequisite:PMTH127 | Teaching language: English |
| Course Level:3 ${ }^{\text {rd }}$ | Credit Hours: 4 hours |

## Module Description

Real numbers and real line - Inequalities - Functions - The graph of a functions - Even and Odd Functions - Composite of Functions - Trigonometric Functions Inverse Functions - Inverse Trigonometric Functions - Limits - Properties of Limits - Techniques for evaluating Limits - Infinite Limits - Continuity Properties of Continuity - Differentiation - The Relationship between Differentiation and Continuity - Differentiation Laws - Derivative of Trigonometric and Inverse Trigonometric Functions - Derivative of Hyperbolic and Inverse Hyperbolic Functions -Logarithmic and Exponential Functions and their derivatives - Using the first derivative to studying an increasing and decreasing functions - Chain Role's Implicit Differentiation - Lohospital's Role Rolle's Role and the Mean Value Theorems - Using Differentiation to studying concavity of functions and studying some applications of Differentiation.

## Module Aims

- Have a knowledge of a line of the real numbers and how solving an Inequalities.
- Have the knowledge of the function of one variable and studying its properties and kinds also how to draw the curve of the function
- Have knowledge of how to find limit of the function and studying its Continuous.
- From this course the student can find the derivative of the function and studying the relationship between Differentiation and Continuity
- Have knowledge of finding the tangent of the curve and the maximum and minimum values of the function.
- Have a knowledge of how the function increased and decreased and draw it also shape of the curve

## Educational outcomes: (understanding, knowledge and mental skills and practical

-After this course supposed that the student is able to

- Have the knowledge of the function and its properties and its different kinds.
- Have knowledge of how to find the limit of a function and studying its continuity.
- Have a knowledge of the derivative of a function and derivatives of different types of functions
- Have knowledge of finding the equation of tangent and normal of a curve and the maximum and minimum values of the function.
- learning curve sketching

Model (5)
Summary Course Description

| Course Name : Statistics and <br> Probability 1 | Course code :STAT 201 |
| :---: | :---: |
| Prerequisite:PMTH127 | Teaching language: English |
| Course Level:3 |  |

Module Description
Definition of statistics - Organization and presentation of statistical data Measures of central tendency (Mean, Median, Mode, ...) of the simple data and the frequency distribution- Measures of dispersion - Sample space and Events Counting Techniques - Definition of the probability and its applications-
Conditional probability - Independence of events - Bayes theorem and its

[^6]applications - random variable- probability Distribution- Some special probability distributions -The Normal distribution.

## Module Aims

- Definition of statistics, population and sample.
- Understanding the concept of statistics and the parameter
- Introducing basic statistical methodology of data analysis including; graphs, descriptive statistics
- Deducing measures of location and dispersions (mean and variance)
- Interpret probabilities and use probabilities of outcomes to calculate probabilities of events in discrete sample spaces- exclusive and independent events
- The purpose of the random variable, some discrete and continuous distributions

## Educational outcomes: (understanding, knowledge and mental skills and practical

-After this course supposed that the student is able to

- Describing basic concepts of data analysis (discrete and continuous)
- Interpreting the sum deviations of data about its mean is equal to zero
- Finding statistical problems, data analysis and interpreting the results
- The importance of counting methods in probability theory
- Understanding properties of the normal distribution of the data

Model (5)
Summary Course Description

Course Name ;Introduction to $\quad$ Course Code :MATH271

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

## Module Description

Plane Analytic Geometry: The Cartesian and polar coordinates - The straight line in its different forms - Equation of two straight lines - The circle Transformation and rotation of axes - Conic sections in general form.Solid Analytic Geometry: Rectangular, spherical and cylindrical coordinates - The distance between two points- Direction cosines of a line - Angle between two lines - The plane in space - The line in space - Quadric surfaces (CylinderCone - Sphere - Ellipsoid - Hyperboloid of one sheet - Hyperboloid of two sheets - Elliptic paraboloid - Hyperbolic paraboloid).

## Module Aims

-Having the knowledge of different coordinates in plane and space

- Having the knowledge of the line and circle.
- Having the knowledge of conic sections in general form.
- Having the knowledge of plane and straight line in space
- Getting the knowledge of quadric surfaces (Cylinder- Cone - Sphere - Ellipsoid
- Hyperboloid of one sheet - Hyperboloid of two sheets - Elliptic paraboloid Hyperbolic paraboloid).

## Educational outcomes: (understanding, knowledge and mental skills and practical

-After this course supposed that the student is able to
-Having the knowledge of different coordinates in plane and space

- Having the knowledge of the line and circle.
- Having the knowledge of conic sections in general form.
- Having the knowledge of plane and straight line in space
- Having the knowledge of quadric surfaces (Cylinder- Cone - Sphere - Ellipsoid Hyperboloid of one sheet - Hyperboloid of two sheets - Elliptic paraboloid - Hyperbolic paraboloid).

| Course Level: $4^{\text {th }}$ | Credit Hours: 4 hours |

## Module Description

Definite Integral and its properties- Mean value theorem of integral. The fundamental theorem of Calculus- Indefinite integrals- Standard integralsDerivatives and Integrals of hyperbolic and inverse hyperbolic functionsTechniques of Integrations: Substitution method- Integration by PartsTrigonometric Substitutions- Integrals involving Quadratics- Integration by Partial Fractions.

## Module Aims

- Studying Definite integral and its properties.
- Studying the mean value theorem of integral.
- Studying the fundamental theorem of Calculus.
- Having the knowledge of Indefinite integral and Standard integrals.
- Having the knowledge of integrals of hyperbolic and inverse hyperbolic functions.
- Having the knowledge of Integration technique.

## Educational outcomes: (understanding, knowledge and mental skills and practical

-After this course supposed that the student is able to
Integration of the basic functions. Integration of hyperbolic functions. Integration of the inverse hyperbolic functions. Acquiring skill in the use of various methods of integration. Calculating areas and volumes using definite integration.

## Course Contents

| Subject List | Weaks <br> numbers | Teaching <br> hours |
| :--- | :---: | :---: |
| Definite integral and its propartie, the mean <br> value thorem of itegration- basic theorem of <br> calculus | 2 | 8 |
| The indefinite integral- the integration of the <br> basis founctions -the differenation and <br> integration of the hyperbolic function and <br> inverse hyperbolic function | 2 | 8 |
| Integral Methods : Substituation mjethod- by <br> parties, trigonometric substitutation- <br> complaeting squre -Partial fracture- the <br> integration of fractuonal functions- an other <br> Substituation | 3 | 12 |
| Lupotal's Rule - improber integrals | 2 | 8 |
| The areas and sizes of objects rotational - the length of <br> the arc of the curve - numerical integration using the <br> trapezoidal method | 3 | 12 |
| Polar Coordinates- graph of polar coordinate <br> -using polar coordinate to find the area | 2 | 8 |

Summary Course Description

| Course name :Linear Algebra 1 | Course Code: MATH241 |
| :--- | :---: |
| Prerequisite : MATH231 | Teaching language: English |
| Course level:4 ${ }^{\text {th }}$ | Credit Hours: 4 hours |

Module Description
Matrices and their operations- inverse of matrix - Matrices and system of linear equations - Echelon matrix.
Vector spaces- Linear subspaces- Linear Combinations and spans - Sum and direct sum
Linear dependence and linear independence - basis and dimensiondimension and subspaces - rank of matrix -application to linear equations coordinates
Linear mappings- Kernel and image of a linear mapping- Rank of linear mapping - Nullity of linear mapping - operations with linear mapping. Determinants and its properties -Minors and cofactors - Classical adjoinInverse of a matrix- Rank of matrix- Linear systems of equations. Polynomial of matrices - Eigenvalues and eigenvectors of a matrix Diagonalization and eigenvectors - Characteristic polynomial - Cayley Hamiltion theorem.

## Module Aims

1. Having the knowledge of matrices and operations on them.
2. Having the knowledge of vector spaces, subspaces and their properties
3.Solving a system of homogeneous and non homogeneous linear equations
4.Having the knowledge of the basis and dimension of the vector space
3. Having the knowledge of Linear mapping.
4. Having the knowledge of Eigen values and eigenvectors of a matrix and their properties.
5. Studying determinants to compute the inverse of a matrix.

## Educational outcomes: (understanding, knowledge and mental skills and practical

-After this course supposed that the student is able to

- To learn the fundamental basis in linear algebra such as: Systems of linear equations, matrices, Vector spaces and calculations of eigenvalues and eigenvectors.
- To improve logical thinking.
- To get the ability to explain physical problems mathematically.

## Course Content

| Subject List | Weaks <br> numbers | Teaching <br> hours |
| :---: | :---: | :---: |
| Matrices | 2 | 8 |
| Vector Spaces and vector subspaces | 3 | 12 |
| Basis and dimantions of vector spaces | 3 | 12 |
| Linear transformationms | 2 | 8 |
| determinate | 2 | 8 |
| Eigenvalues and eigen functions | 2 | 8 |

## Module Description

- Vectors fields:
- Vectors fields in two-three dimensions
- Algebraic operations on vectors. Definitions of gradient- divergence- curl on the vectors.
- Provide the basic elements of analytical geometry- plans and lines in three dimensional space and surfaces. --Equation of tangent and rectum governing on the surface.
- Calculating the dimensional derivatives-Vector functions - functions on one variable
- Curvilinear: curvilinear coordinates - orthogonal curvilinear coordinates: line
integral- surface integral- volume integral
- Relationship between line integral- surface integral- volume integral and theorems Gausses- Green- Stokes.

## Module Aims

-To know the concept of the vector in two and three dimensions -To know the methods of calculating basic operations on vectors and calculate the scalar multiplication and vector
-To know the methods of calculating the linear bending and integration on the surface
-To know some of the applications on the integrals achieve theories Green ,Stokes and Gauss divergence

## Educational outcomes: (understanding, knowledge and mental skills and practica

## - After this course supposed that the student is able to

- Algebraic operations, scalar and vector product of vectors in two or three dimensions
- Finding the equations of the straight line and plans in the three dimension space
- Calculating Function domain for a real variable vector and checking function limits and continuity.
- Calculating the curvature (bending) and orthogonal curvilinear coordinates to a curve in the space
- Derivation of directional derivative and decline of a function
- Calculating of linear and surface integrals.
- Achieving the opposite theory in the plane(Green's theory)
- Achieving Stokes theory
- Achieving of the Gaussian theory spacing

## Module Description

Cartesian, cylindrical and spherical coordinates-Functions of two or more variables-Domain of the function-three dimension rectangular coordinatesChain rule-Limits-Continuity-Partial derivative-Higher order partial derivatives-Differentiation of composed function- Maxima and minimaMethod of Lagrange multipliers for maxima and minima. Double integrals in Cartesian and Polar coordinates - Triple integrals in spherical and cylindrical coordinates-Sequences and Infinite series- convergence testsRepresentation of functions by power series- Taylor and Maclaurin and the binomial series.

## Module Aims

This course aims to generalize the concepts of functions with single variable to functions with multiple variables and identify different applications.

Educational outcomes: (understanding, knowledge and mental skills and

## practica

- After this course supposed that the student is able to
- Identify the functions in more than one variable and their properties
- Partial knowledge of calculus-Knowledge of the properties of double and triple integration in different coordinates-
- series properties in terms of convergence and divergence
- Unscrewed Taylor and Maclaurin.

## Module Description

#### Abstract

Basic concepts: Definitions. Classifications of ODEs. Solutions types. Origin of ODEs. Basic First-order differential equations. Methods of solutions - Separable variables - Homogeneous equations - Exact equations - Linear equations Equations of Bernoulli - Ricotta. Substitutions - Picard's methods - Linear differential equations of higher-order - Homogeneous equations with constant coefficients, Method of undetermined coefficients, Method of variation of parameters. Differential equations with variable coefficients, Cauchy-Euler equations - Laplace Transform - Applications of Laplace transform to solve ordinary differential equations.

## Module Aims

- This course is primarily designed for undergraduate students studying Mathematics.
- Deriving ODEs that describe various phenomena in physics, mechanics, chemistry, biology, etc.
- Learning various methods for solving a great variety of differential equations
- Upgrading the skills of the student to understand physics, mechanics, chemistry, biology

Educational outcomes: (understanding, knowledge and mental skills and practica

- After this course supposed that the student is able to
- Recognizing the differential equation and its order and degree.
- Recognizing the methods of solving differential equations of the first order.
- Recognizing the applications of differential equations of growth problem and perpendicular tracks
- Recognizing methods of solving differential equations of higher order and the properties of solutions.
- Recognizing the Laplace's transform and its properties and how to use them in solving differential equations.

## Module Description

Numerical methods for solving nonlinear equations (bisection - iteration Newton - false position ... )- errors and rates of convergence- Direct methods for solving linear systems (Gauss elimination,LU decomposition) and iterative methods (Jacobi -Gauss Seidel - Relaxation)-errors- iteration matrices and convergence of iterative methods- Polynomials interpolation (LagrangeNewton's methods: divided differences- forward and backward differences) and analysis of errors- Numerical differentiation and integration- errors and accuracy- Gaussian integration formulas- Euler and Taylor methods for solving differential equations of first order.

Module Aims

- Having the knowledge of the ways to solve some problems in numerical ways using computers.
- Having the knowledge of how to find the derivatives and integrations using numerical methods
- Having the knowledge of how to solve matrix with large dimensions
- Having the ability of interpolation to functions and how to find a function if we know only some points
- Using numerical methods to solve integrations which have no known solutions
- Solving some problems - making some research in Libraries and using

## Educational outcomes: (understanding, knowledge and mental skills and practica

## -After this course supposed that the student is able to

- Solving some problems in numerical ways using computers.
- Finding the derivatives and integrations using numerical methods
- solving matrix with large dimensions
- making interpolation to functions and how to find a function if we know only some points
- solving integrations which have no known solutions-making some search in Libraries and using internet

Summary Course Description

| Course name: Linear Programming | Course code :MATH352 |
| :--- | :--- |
| Prerequisite: linear <br> algebraMATH241 | Teaching language: English |
| course level:5 |  |

Introduction to operations research-Mathematical model for some real problems- Mathematical formulation of linear programming problemGraphical method for solving linear programming problems- Convex sets-Polygons- Extreme point- Optimality theorem- Analytical method (Simplex method) - Big-M method - Two-phase method- Formulation mistakesDuality problem- Sensitivity analysis- Application to transportation and network problem.

## Module Aims

- Knowing how to make the mathematical model of some actual problems (the mathematical formulation of the linear programming problem
- Recognizing the optimality theory and the different methods for solving the linear programming problem.-
- Knowing the problem the solution of the duality problem and sensitivity analysis for each problem.
- Knowing how to apply the linear programming in solving some of the actual problem (transportation and networks problems).

## Educational outcomes: (understanding, knowledge and mental skills and practica

- After this course supposed that the student is able to
- Recognizing the Operations Research and the mathematical modeless of some actual problems.
- Knowing how to form the mathematical models of the linear programming problems.
- Knowing the convex sets, convex functions and concave functions, polygons, vertex points and the theory of optimization-Knows different methods for solving the linear programming problem.
- Concluding the duality problem and its solution.

## Module Description

The ability to make optimal use of technology in the consolidation of mathematical concepts

- The ability to deal with mathematical software and use them to solve problems.
- Conclusion skills and analysis
- The ability to write mathematical programs to solve mathematical problems using the computer
- Learn the skills of scientific research and oral recitation skills

## Module Aims

- The student acquires knowledge the following:
- The principles of the use of mathematical programs Mat lab and Mathematical for mathematical calculations and programming for calculus and linear algebra.
- The use of the Internet for scientific research and the basics of writing reports and scientific research using scientific the workplace and presentation skills.

## Educational outcomes: (understanding, knowledge and mental skills and

## practica

- After this course supposed that the student is able to

Upon completion of this course the student is supposed to be able to use a mathematical software

- Calculation of derivatives of functions of different ranks
- Evaluation of definite and indefinite integrals
- Calculation of determinants
- Implementation of algebraic operations on Mathematics
- Calculation of the inverse matrix
- Solving a system of linear equations
- Editing Mathematical reports or texts scientific workplace editor
- Providing reports and texts on power point presentations.

## Module Description

Basic Properties of the field of real numbers - completeness axiom - Series and their convergence - monotone sequences - Bolzano-Weirstrass theorem - Cauchy criterion- Basic topological properties of the real numbers- Limit of a functions - continuous functions and their properties - Uniform continuity compact sets and its properties- The derivative of a function -Mean value theorem. L'Hospital rule-Taylor theorem. Cauchy theorem

## Module Aims

Majmh University - Vice President for Educational Affairs - management programs and study plans
(College of Sciences in Zulfi- Department of Mathematics)

- Studying basic properties of the field of real numbers - completeness axiom - series and their convergence - monotone sequence - BolzanoWeirstrass theorem
- Learning Cauchy criterion- Basic topological properties of the real numbers- Limit of a function
- learning continuous functions and their properties - Uniform continuity and the difference between them
- Studying the concepts of compact sets and its properties
- Studying the derivative of a function, mean value theorem. L'Hospital ruleTaylor theorem.

## Educational outcomes: (understanding, knowledge and mental skills and practica

- After this course supposed that the student is able to
- This course is interested to study the main concepts in basic Properties of the field of real numbers - completeness axiom - Series and their convergence - monotone sequence - Bolzano-Weirstrass theorem - Cauchy criterion-
- Recognize the basic topological properties of the real line
- Recognizing the concept of the limit of a function, continuous functions and their properties
Recognizing the uniformly continuity, compact sets and its propertiesKnowing the derivative of a function -Mean value theorem. L'Hospital rule-Taylor theorem.
- Recognizing the generalization of the mean value theorem such as L'Hospital rule-Taylor theorem

## Module Description

Some rules of probabilities and definition of the random variable- mathematical expectation - some discrete probability distributions - some continuous probability distributions- functions of random variable- bivariate random variables- sampling distributions

## Module Aims

- Defining statistics, population and sample.
- Understanding statistics and the parameter
- Determine probabilities from probability mass functions and the reverse
- Understanding the assumptions for each of the discrete probability distributions presented. Select an appropriate discrete probability distribution to calculate probabilities in specific applications
- Approximating probabilities for some binomial and Poisson distributions
- Deducing the sampling distribution of the sample mean and showing that it is unbiased estimator of the population mean.

Educational outcomes: (understanding, knowledge and mental skills and practica

- After this course supposed that the student is able to
- Determining probabilities from probability mass functions and the reverse
- Determining probabilities from cumulative distribution functions
- Understanding the assumption

For each of the discrete probability distributions presented.

- Selecting an appropriate discrete probability distribution to calculate probabilities in specific applications
- Standardizing normal random variables.
- Approximating probabilities for some binomial and Poisson distributions.

Course Content

| Prerequisite : MATH241 | Teaching language: English |
| course level:6 ${ }^{\text {th }}$ | credit hours :4 hours |

## Module Description

#### Abstract

Definitions and examples of groups, subgroups, Lagrange's theorem, normal subgroups, quotient (or factor) groups, cyclic groups, homomorphism, Isomorphism's theorems, Auto orphism, Cayley 's theorem and its generalization, Simple groups, SymmetrIC groups, , Group action on a set, Classes equation. p-groups, Cauchy's theorem, Solow's theorems, External and internal product of groups, Burnside's theorem, Dihedral groups, Quaternion's groups, Groups of auto orphisms of a finite and infinite groups.

## Module Aims

- The student will be familiar with the concept of a group, the subgroup of a group and the notion of cyclic groups.
- The construction of a quotient set from a group and an equivalence relation on this group and the deduction of Lagrange's theorem.
- As a third aim, the introduction of normal subgroups permits us to construct new group (the factor group). We also define simple groups
- Introducing the concept of isomorphic groups and studying the isomorphism's theorems and finally as an application the Cayley's theorem
- P-groups, Cauchy's theorem
- Studying the group of auto orphisms, the action of a group on a set and the Solow's theorems.
- We study as a consequences of the previous section; Groups of auto orphisms of a finite and infinite groups.

## Educational outcomes: (understanding, knowledge and mental skills and practica

- After this course supposed that the student is able to
- Acquisition of knowledge by studying some basic concepts and fundamental theorems of abstract algebra.
- Acquisition of some skills towards the reflection and the solving of some problems related the groups theory
- Applying the acquired knowledge in Basic Mathematics
- The student will be able to apply the principal concepts of group theory to solve problems related to groups in abstract algebra.

## Course Content

[^8]
## Module Description

- Its Origin and classification - First-order equations and first degree- The solution by Lagrange method - Cauchy's Problem
- Linear equations of second order in several variables - ClassifiCation of second order equations - Methods of solutions -The solution by separation of variables - Physical applications for the solution by separation of variables -Boundary value problem- Green function

## Module Aims

- How to form partial differential equations.
- The various forms of the partial differential equation and how to solve it.
- The different methods for solving the partial differential equations.
- Recognizing of some Physical phenomena that expressed by partial differential equations and how to solve each equation.
- Recognizing the Green function and how to deal with boundary value problems.

## Educational outcomes: (understanding, knowledge and mental skills and practica

- After this course supposed that the student is able to
- Recognizing the partial differential equations and difference between them and ordinary differential equations.
- Constructing partial differential equations.
- Recognizing the Lgrange methods and cushy problem.
- Recognizing the method of separation of variables.
- Recognizing some physical phenomena and the equation of every phenomena and how to solve them.

## Summary Course Description

| Course name :Introduction <br> to Topology | Course code : MATH472 |
| :--- | :--- |
| Prerequisite: MATH381 | Teaching language: English |
| course level:7 ${ }^{\text {th }}$ | credit hours:3 hours |

## Module Description

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

#### Abstract

Definition of topological spaces - open sets and interior operator - limit points - closed sets and closure operator - cluster points - isolated points operators and neighborhoods - relative topology- product of topological spaces Definition of continuous functions - open and closed functions homeomorphisms - topological property - separation axioms - Hausdroff and Lenz separation axioms- definition of compactness - continuous functions and compactness- compactness and separation axioms - dense sets . Definition of connectedness - connectedness and continuous functions connectedness and compactness- components - metric spaces. Definition of connectedness - connectedness and continuous functions connectedness and compactness- components - metric spaces

## Module Aims

- Definition of the concept of topological space, open groups, home, end points, closed sets and narrow-mindedness, cluster points, isolated points, effects and neighborhoods, and relative topology rules, goats spaces ending
- Definition of the concept of interdependence and conditions Hozdorv for Linz to disperse, the definition of the concept of stacking, and Numerical stacking, continuous functions, functions open, dense groups itself, Topological Alchaclat of the topological character
- Definition of the concept of continuous functions, functions open and closed, dense groups itself, topological Alchakl of the topological character.

## Educational outcomes: (understanding, knowledge and mental skills and practica

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

## - After this course supposed that the student is able to

- The student knows the concept of topological spaces and its importance to pure mathematics.
- The student understands the concept of continuous functions open and closed functions - homeomorphisms - topological property - separation axioms - Hausdroff and Lenz separation axioms- definition of compactness - continuous functions and compactness- compactness and separation axioms - dense sets and its importance to the study of general topology.
- The student learns the concept of connectedness and the relation between connectedness and continuous functions and also the relation between connectedness and compactness and knows components and metric spaces concepts.
- The student getting used to the concept of connectedness and the relation between connectedness and continuous functions and also the relation between connectedness and compactness and knows compactness and metric spaces concepts.

Model (5)
Summary Course Description

| Course name : Rings and Fields | Course code :MATH443 |
| :--- | :--- |
| Prerequisite : MATH342 | Teaching language: English |
| course level:7 |  |

## Module Description

Rings and group of units of a ring. Group of auto orphisms of a ring. Ideals and the quotient rings. Principal rings. Prime and Maximal ideals. Field of quotients of an integral domain. Characteristic of a ring. Direct sum of rings. Modules over a ring. Euclidian rings. The ring of polynomials $\mathrm{A}[\mathrm{X} 1, \mathrm{X} 2, \ldots, \mathrm{X} \mathrm{n}]$ over a ring A . Roots of polynomials over a Field K. Extension of fields. Simple and finite
extensions of fields. Splitting fields and Algebraic Closures. Finite fields.

## Module Aims

- Building a solid mathematical knowledge on rings as an important algebraic base and tools needed in many domains of mathematics.
- Euclidian rings and the ring of polynomials over a field will be studied in details.
- The extension of fields and the finite fields is one of the most important axes of the module. They can be used in many domains as cryptography and coding theory.

## Educational outcomes: (understanding, knowledge and mental skills and practica

## - After this course supposed that the student is able to

- To make sure that the student is able to understand the concepts of abstract algebraic structures as rings fields and other. To make him capable to establish the differences between two structures by studying their properties.
- By adding some facts, the student will be able to extend the notion of a ring to a structure more important and having nice properties
- Modules will be shown that they can be seen as an extension of the notion of linear spaces.
- The student will be able to construct new finite fields from elementary ones.
- The student will be capable to extend the notion of divisibility seen in R[X] to any ring of the form $\mathrm{A}[\mathrm{X}]$, where A is some ring.

Module Description
This course is concerned with the studying of the different spaces such as the metric space-the linear space-the normed space-Banach space-the inner product space-Hilbert space and considering the different basic theorems

## Module Aims

- Introducing the notion of the different spaces (Metric-linear-Normed -Bannach--Inner product-and Hilbert spaces )
- Clarifying the meaning of the open and closed sets in metric spaces
- Introducing the notion of the bounded linear and continuous operators and related theorems
- Solving some problems which clarify the essential properties of the above spaces
- Studying the inner product space which is a corner stone in the theory of Functional Analysis
- Introducing the bounded linear operators between Hilbert spaces Self adjoint-normal and unitary operators
Educational outcomes: (understanding, knowledge and mental skills and practica
- After this course supposed that the student is able to

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

- Differentiating between different spaces
- Understanding the basic theorems concerning the above spaces
- Making sure that the concept of open and closed sets in metric spaces is well known
- Understanding the notion of bounded linear operators
- Understanding the concept of Hilbert spaces and bounded linear operators between Hilbert spaces

## Module Description

Motion in two dimension polar coordinates -Newton's law in a planefundamental of fluid dynamic-continuity equation in different fluids Derivative the initial and boundary problems in MHD- Temperature equation-some special solutions for last problems by using suitable mathematical methods

## Module Aims

- Derivative the motion's law in different coordinate for point and rigid body
- Studying the fundamental theory in fluid dynamic and derivative of the continuity equation for different fluids
- Studying and derivative the boundary value problem in MHD
- Studying and derivative the temperature distribution, temperature a equation and wave equation
- Studying derivative methods for Fourier series
- Studying methods solutions the boundary value problems by using the different mathematical methods

Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- To know the fundamental studying methods the motion for different coordinate for the point and rod body.
- Knowing new methods for integration and using it to solve the problems the fluid dynamic and the motion in different coordinate.
- Knowing methods by using Fourier series to solve the boundary problem in temperature and MHD.
- Knowing methods to deduce the applied mathematics problems by using differential equations.
- Knowing methods for understand- ting solution of partial differential equations by using suitable mathematical methods.

Module Description
Definition of Riemann integral- Dario theorem and Riemann sums -
Properties and the principle theorem in calculus.Sequance Series of functions- Poi twice convergence and uniform convergence- Algebra and (sigma algebra)- Finite additive and countable additive- Main extension theorem and outer measure- Measurable sets - Measure - Lebesgue measure and its properties- Simple functions- Measurable functions- Lebesgue integralTheorems of convergence- The relation between Lebesgue and Riemann integral.

Module Aims

The aim of this course :

- Studding Dario theorem a, Riemann sums properties and the principle theorem in calculus.
- Studding a sequence, series of functions, poi twice convergence, uniform convergence, algebra and sigma algebra.
- Studding finite additive and countable additive- Main extension theorem and outer measure- measurable sets.
- Studding a measure, Lebesgue measure and its properties, simple functions, measurable functions, Lebesgue integral, theorems of convergence, and the relation between Lebesgue and Riemann integral

Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Understanding of Dario theorem a, Riemann sums properties and the principle theorem in calculus.
- Understanding a sequence, series of functions, poi twice convergence, uniform convergence, algebra and sigma algebra.
- Have knowledge of finite additive and countable additive- Main extension theorem and outer measure- measurable sets.
- Knowing on the concept of a measure, Lebesgue measure and its properties, simple functions, measurable functions, Lebesgue integral, theorems of convergence, and the relation between Lebesgue and Riemann integral

## Module Description

First and second principle of Mathematical Induction- Well-ordering principle -Divisibility- Euclidean Algorithm. Primary Numbers and their properties- Linear Diophantine Equations- Congruence's and their properties- linear

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

Congruence's- The Chinese Remainder Theorem- Fermat's little theoremEuler's theorem-Wilson's theorem- Arithmetic functions- Pythagorean triples..

## Module Aims

- This course aims to give students the basic concepts and properties of the integers and reliable in the study of abstract algebraic concepts.
Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Acquiring knowledge by learning theories, and basic concepts in the theory of numbers.
- The ability of students to apply the basic principles of the theory of numbers that they have learned in this course to solve some numerical problems.
- The ability to identify appropriate analytical procedures to find the right solution for some of the problems of life

## Course Content

| Subject List | Weaks <br> numbers | Teaching <br> hours |
| :--- | :---: | :---: |
| First and second principle of Mathematical <br> Induction- | 1 | 2 |
| Divisibility- Euclidean Algorithm | 1 | 2 |
| Primary Numbers and their properties | 2 | 4 |
| Linear Diophantine Equations- Congruence's <br> and their properties- linear Congruence's | 2 | 4 |
| The Chinese Remainder Theorem | 2 | 4 |
| Well-ordering principle | 1 | 2 |
| Fermat's little theorem- Euler's theorem- <br> Wilson's theorem | 2 | 4 |
| Pythagorean triples | 1 | 2 |
| - Arithmetic functions | 2 | 4 |

| course level:Elective | credit hours:3h. |

## Module Description

Basic concepts for optimality- Convex \&concave functions- Quadratic FormsOptimality of unconstrained nonlinear functions in one or several variablesHessian matrix- Optimality of nonlinear functions with equality constraintsDirect substitution method- Lagrangian multipliers method- Optimality of nonlinear functions with inequality constraints - Kuhn -Tucker conditionsQuadratic Programming.

## Module Aims

- This course aims to give students the basic concepts of optimization and different ways to treat optimization restricted and unrestricted and the
possibility of the practical application of these concepts.

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Recognizing the basic concepts of optimization functions convex and concave functions and the quadratic formulas.
- Solving the optimization of non-linear programming in one variable or multiple variables and how to use the Hessian matrix for it.
- Recognizing on methods for solving the optimization problem of nonlinear programming with constrained equations (substitution direct method - Lagrange multiplier method
- Recognizing the methods of solving optimization problem with inequality constraints
- Recognizing the Kuhn-Tucker and Fritz -John conditions for solving the optimization problem

## Course Content

| Subject List | Weaks <br> numbers | Teaching <br> hours |
| :--- | :---: | :---: |
| The concept of the optimality- convex and concave <br> functios - quadraic formula | 3 | 9 |
| The optimality of problems in singal and sevral <br> variables without constraints - Hessian Matrix | 2 | 6 |
| The optimality of non-linear problems with <br> equality constraints | 1 | 3 |
| Substituation method- Lagrange multipliers <br> method | 2 | 6 |
| The optimality of non-linear problems with <br> inequality constraints | 1 | 3 |
| Fritz-John and Kuhn-Tucker optimality conditions | 3 | 9 |
| The quadratic formula for the optimality problem | 2 | 6 |

## Summary Course Description

| Course name: Calculus of variation | Course code :MATH405 |
| :--- | :--- |
| Prerequisite : MATH321 | Teaching language: English |
| course level:Elecative | credit hours :3h. |

## Module Description

Extremum of a function of many variables ( absolute and conditional extremum), The Functional - The variation of a functional and its properties, The elementary problem in the calculus of variations- Euler's equation- Generalizations of the elementary problem of the calculus of variations - Field of Extremals, Sufficient conditions for the extremum of a functional - conditional extremum- moving boundary problems, The Hamilton-Jacobi theory- the variation principles of Mechanics, Some applications

## Module Aims

- Having the elementary knowledge of extremum for function of several variables
- Having the knowledge of Euler-Lagrange equations and its applications
- Having the knowledge of the generalizations and special cases of EulerLagrange equations
Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)
- Having a knowledge of Hamiltonian equations and its applications

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Solving some extremum problems of functions of several variables
- Deriving of Euler-Lagrange equation
- Deriving of the generalizations and special cases of Euler equation
- Deriving of Hamiltonian equations
- Having the knowledge of some variation calculus applications
- making some search in Libraries and internet

## Course Content

| course level:Elective | credit hours:2h. |

## Module Description

Topological vector spaces: Definitions, semi- norms and their induced topologies- criteria forcontinuity of semi-norms and linear maps- Schwartz space $S\left(R^{n}\right)$-continuity of $S\left(R^{n}\right) \rightarrow R^{n}$ Tempered distributions: the space $S^{\prime}\left(R^{n}\right)$ differentiation of distributions and multiplication by functions of slow increase examples. Fourier analysis : Fourier transform on $S\left(R^{n}\right)$ - main properties Fourier inversion theorem- Plancheral formula- Fourier transform on $S^{\prime}\left(R^{n}\right)$ properties -weak topology of $S^{\prime}\left(R^{n}\right)$ - Fourier series in $S^{\prime}\left(R^{n}\right)$ - convolutions and continuity properties - compatibility - Riemann-Lebesgue lemma - the space
$C_{0}\left(R^{n}\right)$. Density theorems : the space $C_{o}^{\infty}\left(R^{n}\right)$-density of $C_{o}^{\infty}\left(R^{n}\right)$ in $S\left(R^{n}\right)-$ the space $B C^{r}$ - approximations to $\delta_{0}$-approximations in $B C^{r}$.Sobolev spaces : definition of $H^{k}\left(R^{n}\right)$ - Fourier transform when $k \in R$ - properties distributional derivative - duality of $H^{-k}$ with $H^{k}$ Sobolev embedding theorem for $H^{k}\left(R^{n}\right)$.

## Module Aims

- Provide key concepts in Fourier analysis and the theory of distribution so that the student by knowing the advanced concepts analysis application and utilization of important analytical techniques in the analysis of the signal and in partial differential equations.
- Student learns some new concepts, some different spaces and some different types of convergence of mathematics.

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Providing key concepts in Fourier analysis and the theory of distribution so that the student by knowing the advanced concepts analysis application and utilization of important analytical techniques in the analysis of the signal and in partial differential equations.
- Students learn some new concepts, some different spaces and some different types of convergence of mathematics.

## Module Description

Sentential Calculus- Logical Equivalence-Arguments- Methods of Proof-
Relations- Equivalence Relations- Order Relations- Boolean Algebras - Logic
Circuit- Graph Theory- Connected Graph-Isomorphic Graph- Planar GraphTrees.

## Module Aims

This course aims to give a direct relationship between the mathematics field and its applications in computer science.

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Recognize on sentential calculus- Logical, arguments and methods of Proof. - Recognize on relations, equivalence Relations and order relations.
- Recognize on Boolean Algebras
- Recognize on Logic Circuit- Graph Theory- Connected Graph
- Recognize on Isomorphic Graph- Planar Graph- Trees.

## Course Content

Summary Course Description

| Course name:Graph theory | Course code :MATH332 |
| :--- | :--- |
| Prerequisite231 : MATH | Teaching language: English |
| course level:Elective | credit hours:2h. |

Module Description

[^10]Introduction to graph theory,Basic concepts (complete graphs- sub graphsspanning sub graphs n-partite graphs complete bipartite graphs - complementary graphs)- Operations on graphs- Sequences and graphs- Matrices and graphsPaths, circuits, cycles and connected graphs- Eulerian and Hamiltonian graphs-Trees- minimal spanning trees-Planar and non-planar graphs- Graph- Graph coloring (complete graphs- Trees - Cubes - partite graphs-Applications- shortest path problems

## Module Aims

Our aims in this course are two folds. First, to discuss some of the major results of graph theory, and to provide an introduction to the language, methods and terminology of the subject. Second, to emphasize various approaches (algorithmic, probabilistic, etc) that have proved fruitful in modern graph theory: these modes of thinking about the subject have also proved successful in other areas of mathematics, and we hope that students will find the techniques learnt in this course to be useful in other areas of mathematics such as computer science .(studies networks), bioinformatics, statistical physics, chemistry, sociology, etc. 2-More precisely In this module we will focus on results from structural graph theory and its applications in related areas, in particular, in algorithm design and number theory. The module should provide an overview of main techniques with their potential applications. We will focus, in particular, our attention on networks and give real world examples of networks include transport networks such as the Gautrain rail system, electric networks, social networks and the internet

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Acquisition of the principal concepts of the theory of graphs.
- To be able to transcript the life problems and then representing in graph theory in order to apply the acquired knowledge to solve them
- The student discovers the importance of Mathematics in solving problems of life. The student will also discover that the theory of graphs can be useful for

Module Description
Triangular matrix-Caley-Hamilton theorem- Characteristic polynomials-Eigen values \&Eigen vectors- Danvour analysis- The Jordan form- Function of a matrixProperties of $\mathrm{e}^{\mathrm{A}}$ - Linear differential equations with constant coefficients and the exponential $\mathrm{e}^{\mathrm{At}}$

## Module Aims

- Introducing students to some of the advanced concepts in linear algebra with some applications
- Matrices The algebraic operations, determinants, the use of these concepts to solve systems of linear equations.
- Giving a survey of eignvalues and Eigen vectors of square matrix and its properties and applications
- Applied concepts of linear algebra to solve the mathematics, statistics, engineering and social sciences problems

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

[^12]- Identifying Kelly Hamilton Theory.
- Understanding the Eigen values and Eigen vectors.
- Making a connection between linear algebra concepts and other branches of mathematics.
- Solving practical problems.
- Solving a system of linear equations in different methods.
- Having knowledge of using proofs techniques.

## Module Description

Review, random experiment, random variable
Random sampling and its methods, normal distribution, t- distribution Distribution of the sample mean, sampling from two populations, testing hypothesis about the population mean, - The analysis of variance, ANOVA Goodness of fit - chi- square test, - fixed and random factors- testing
hypothesis about correlation coefficient $\boldsymbol{\rho}$-SPSS or MINITAB Statistics Software Packages

## Module Aims

- Understanding the statistic and the parameter- deducing the distribution of the sample mean. Using t - distribution for testing hypotheses and confidence intervals.
- Constructing confidence intervals on the mean of a normal distribution, using either the normal distribution or the t distribution
- Deducing and understanding the distribution of the sample proportion.
- Testing hypothesis about correlation coefficient.
- Understanding how the analysis of variance is used to analyze the data from these experiments
- Use SPSS or MINTAB Statistics Software Packages

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Deducing the distribution of the sample mean.
- Constructing confidence intervals on the mean
- Understanding meaning of statistical testing hypotheses
- Interpreting the analysis of variance
- Using SPSS or MINTAB Statistics Software Packages

| course level:Elective | credit hours:2 |

Module Description
General introduction- Importance of Inventory Control - deterministic modelsEconomic order quantity (EOQ) - Reorder Point (ROP) - inventory models for
single item and multiple items - Some dynamic inventory models - EOQ Without the Instantaneous Receipt Assumption. Quantity Discount Models- Use of Safety Stock. Dependent Demand. Some probabilistic inventory models - Dynamic optimization of inventory scheduling. - Lead-time demand Normally distributed. - Other distributions for the Lead-time demand; EOQ as a special case. Constrained Inventory models. Optimal solution using geometric programming and lagrangian multiplier techniques

## Module Aims

Understanding the importance of inventory control and ABC analysis.

- Using the Economic order quantity (EOQ) to determine how much to order.
- Computing the reorder point (ROP) in determining when to order more inventory.
- Understanding the use of safety stock with known and unknown stock out costs.
- Describing the probabilistic inventory models.
- Solving constrained inventory problems.

## Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Knowing the difference between the deterministic and probabilistic inventory systems
- Using the Economic order quantity (EOQ) to determine how much to order.
- Understanding the use of safety stock with known and unknown stock out costs.
- Describing the probabilistic inventory models
- Finding the optimal solution for constrained inventory system

## Model (5) <br> Summary Course Description

| Course name : Mathematics History | Course codeMATH335: |
| :--- | :--- |
| Prerequisite : MATH231 | Teashing Langue : English |
| course level:Elective | credit hours :2h. |

## Module Description

Evolution of some mathematical concepts, facts and algorithms in Euclidean geometry-analytic geometry and -algebra, trigonometry-arithmetic calculus through early civilizations-Egyptian-Babylonians-Greeks-Indeans-Chinese-Muslims and Europeans - Evolution of solutions of some conjectures and open problems.

## Module Aims

the mathematics and its various Definition to the student the roots of applications in algebra, geometry and recognizing the achievements of Arabs .and Muslims scholars in this field

## Educational outcomes: (understanding, knowledge and mental skills and practica

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

## After this course supposed that the student is able to

- Knowing the striking similarity between the ancient peoples Almeria, Babylonian, Greek, Chinese, Islamic and European -
- To know some modern theories in the mathematical sciences have roots in the depths of history therefore be more established and stable in mind
- Studying the history of many mathematical concepts different mathematical algorithms in arithmetic and algebra, trigonometry , planar and analytic geometry and calculus
- knowing some famous mathematicians and the role of Arab and Muslim scholars in the development of mathematics.

## Course Content

| Subject List | Weaks <br> numbers | Teaching <br> hours |
| :--- | :---: | :---: |
| The emergence and development of some of the concepts, facts <br> and mathematical algorithms in the account through ancient <br> civilizations, Egyptian, Babylonian, Greek, Chinese, Islamic and <br> European | 3 | 6 |
| The emergence and development of some of the concepts ,facts <br> and mathematical algorithms in algebra and trigonometry through <br> ancient civilizations, Egyptian, Babylonian, Greek, Chinese, Islamic <br> and European | 3 | 6 |
| The emergence and development of some of the concepts,facts <br> and mathematical algorithms in solid and analytic geometry <br> through ancient civilizations, Egyptian, Babylonian, Greek, Chinese, | 3 | 6 |
| Islamic and European |  |  |

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)
and mathematical algorithms in calculus through ancient civilizations, Egyptian, Babylonian, Greek, Chinese, Islamic and European
Devlopment of some of the accounts and open problems and attempts to solve them

Summary Course Description

| Course name : Numerical <br> Analysis2 | Course code 455 :MATH |
| :--- | :--- |
| Prerequisite : MATH351 | Teashing Langue :English |
| course level:Elective | credit hours:3h |

Module Description

Advanced Numerical methods with computer applications-approximation theory polynomial approximations- Chebyshev polynomials- trigonometric polynomialsrational function approximation - least square problems- Direct methods for large and sparse linear and nonlinear systems- backward error analysis-Numerical methods for solving ordinary differential equations- solving partial differential equations by finite differences and finite elements methods.

## Module Aims

- Learning the basics of mathematical calculators and recycling Errors
- Deriving some numerical methods, error analysis and studying the stability and convergence.
- Studying some numerical methods to solve boundary value problems (finite difference methods for issues of linear and non-linear assembly and method of error analysis and convergence study.(
- Writing the implementation of algorithms to solve some issues using numerical methods by computer.

Educational outcomes: (understanding, knowledge and mental skills and practica

After this course supposed that the student is able to

- Learning numerical methods for solving ordinary differential equations.
- Learning methods to solve numerical threshold values.
- Learning numerical methods for solving partial differential equations using finite difference method.
- Learning numerical methods for solving partial differential equations using finite element method.

## 1-Material resources

What is the number of classrooms needed for the department:
(Please describe and explain the information about the required classrooms within the submitted studing )
The total number

## 9

Currently the number required

## 3

What is the number of labs and workshops for the department:
(Please describe and explain the information about the required laboratories and workshops within the study submitted with the application)

| The <br> total <br> number | 3 | The <br> total <br> cost | R.S | Currently the <br> number required | 2 | Currently <br> Cost | R.S |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

What are the offices of a number of faculty members, lecturers and teaching assistants are required:

| The total number | 24 | Currently the number <br> required | 12 |
| :---: | :---: | :---: | :---: |

What is the number of offices for management and services, meetings and conferences:

| Management <br> Offices | 2 | Student Services | ---- | conferences: | ---- | meetings | 1 |
| :---: | :---: | :--- | :--- | :--- | :--- | :--- | :--- |

Please specify the administration offices and the services required: (Head of Department, Associate, secretary, library, ..... etc.)
Office of the Head of the Department, (1) Associate, (1) secretary (1), library (1)
Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

## Seventh: tools and sources of teaching and learning

## 1-Teaching and learning tools

What are the learning tools necessary to implement the program: (Please select the tool and customized)

## Classic tools

Classrooms - books and references process - Computer Lab - Display devices

## Audio tools

No

## Optical Instruments:

No

Electronic tools and programs: smart boards - Internet - ready-made programs such as maple-mat lab

## 2-Sources of teaching and learning

What are the sources of learning are proposed: (Select the source type and detailed)

## Journals and reviews

http:// www.sciencedirect.com
http :// www.springer.com
/http:// www.siam.org-
/htt://mathforum.org/advanced/numerICal.htm

## Specialized websites

http:// www.gigabedia.org
http://ww.cmi.univ-mrs.fr
/http://ww.arxiv.org
/http://www.ims.ac.uk
http://www.ams.org
Other educational resources (courses, workshops, and training): A workshop attended by students weekly in the department
What is the ratio of textbooks that are currently available in the library of the courses that will

[^13]be taught in the program: (List compiled)
What is the ratio of Journals that are currently available and has a relationship to the program: (70\%)
What is the ratio of scientific resources and support that are currently available in the library and will be used to teach courses in the program: (e-library)
Determine a major book and at least one for each course in the plan and the supporters of two books and fill out the table below

## Text books

Eighth: The future plan for the program: (here meant the strategic plan of the department during the five years since the start of the work program)

## 2 -Training plan be developed and implemented for students

- Choose courses that need to Field Training
- Identification of field training hours for each course
- formation of a committee of staff members of the department to oversee on the training
- student assessment

## 3-Steps that will be taken to ensure the quality of education in the department through academic advising:

1. The establishment of a committee to guide the academic department and distributed to members of the student department
2. Continuous follow-up of the Committee for academic supervisor to do its part in solving the problems faced by students
3. Work meetings with students on an ongoing basis by the Commission

## 4-Tests:

1. The establishment of a committee of the department for tests
2. Meeting with students and took their perceptions about the scale tests
3. Working to solve the problems faced by students opposed to the tests in the table

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)
4. Receipting a copy of the papers questions about tests
5. Clarify the distribution of grades for each course of study and announcing to the students

## The teaching process:

1. The distribution of courses to members of the department
2. Course schedule and the work of the announcement by the bulletin board department before the beginning of the semester with a time sufficient to allow for students to register
3. Follow the status of the teaching classrooms
4. Provide teaching supplies (pens - blackboards - install programs for students on computers lab department)

Graduation Projects:

1. Announcement bulletin board department for students registration requirements for graduation project
2. Recording the wishes of students
3. Distribution of students according to their wishes to the staff of the department
4. Appointment to discuss projects

Training:
Other things (as unwillingly): field training

## Ninth: quality requirements: (model b)

-     - Study Plan (academic program):

1- Are the descriptions of programs depending on the quality requirements?
2- Does the program achieve educational outcomes that have been developed?

## $\checkmark$ Yes $\square$ Partialy $\square$ No $\square$

$\checkmark$ Yes $\square$ Partialy $\square$ No $\square$

- scientific description of courses:
- Is the description of courses in accordance with the quality standards and compare them with their counterparts in other universities?
- Have you been to choose courses according to the rates that meet the learning outcomes of the program?
- Are the outputs of scientific courses according to specified criteria?

## Teaching staff

- Have you been choosing specialties with professors in order to achieve the objectives of the course?
- Do you think that the necessary disciplines are available for your department?
- In case of difficulty provide qualified teaching staff, what is your plan to find alternatives? The assignment of the corresponding sections of the collaborators, which is available by Specialization
$\checkmark$ Yes $\square$ Partialy $\square$ No $\square$
$\checkmark$ Yes $\square$ Partialy $\square$ No $\square$

## The core outputs of the academic program( Put the sing $x$ in

 the cell which verify the out come of the course1 - The student learns the deductive nature of mathematics, and the role of definitions , axioms and theorems to form a true debate effectively.

2 - To provide students the theories and applications of other Mathematical fields.
3 - The student learns to numerical mathematics and the different methods in which the use of numerical information

4 - The student learns the algebraic relations and their role in solving the problems expressed in the form of a symbolic and in the development of mathematical theories

5-To determine the student's mathematical methods and technology that deal with differential equations and their applications

6 - To mentioned the student geometrical concepts and methods of measuring things recipes 7 -To determine the student calculation methods and capabilities of multiple pure mathematics to solve a specific problem numerically without resorting to direct count 8 -The ability to put ideas and mathematical methods in the form of equations using the vocabulary and the appropriate mathematical symbols 9 - The ability to encode problems in mathematical models and use these models for the evaluation and decision-making

10 - The ability to view, summarize and analyze problems
Majmh University - Vice President for Educational Affairs - management programs and study plans
(College of Sciences in Zulfi- Department of Mathematics)

11 - The ability to develop the relationship between the different branches of mathematics ,and between mathematics with other sciences

12 - The ability to use appropriate means to study Applied Mathematics
13 -To judge the accuracy of the mathematical methods and the appropriateness of the results

14 -To determine the students a range of the credibility for mathematical discussions, the sincerity and reasonableness of results

15 - The use of modern techniques in communicating with others and fruitful cooperation with them in a professional manner .

16 - Discover how to use the technology in the exploration and creation of new ideas, identify trends, and forecasting .

17 - Using the basics of statistical and mathematical methods ,and techniques in the study field

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

## Student Affairs:

Procedures that are followed in the evaluation of the student:
Distribution of marks

| Assessment methods <br> Semester grades work 40\% | Proportion of Final <br> Assessment |
| :---: | :---: |
| Homework and discussions | $10 \%$ |
| First mid term exam | $15 \%$ |
| Second midterm exam | $15 \%$ |
| Final exam | $60 \%$ |
| Total | $100 \%$ |

Note: - Based on the Deanship of Admission (tests and estimates) item 3 If you
require a study of project course (search) more than a semester, the student get on continuous estimate ( m ) or (IP), after that if he finshed the course , he will take the estimation in which he got, and if you do not complete the scheduled time,the department councile give to the student the estimation (IC) in the student's record

## - the procedures that will be used to examine the achievement of the

 standards:1 - create a unit of quality in the program
2 - named coordinator of the quality of the program
3 - work of the organizational structure of the program
4 - Action questionnaires students
5 - Action questionnaires faculty members
6 - Action questionnaires measuring user satisfaction
7 - reports
8 - interviews
9 - field visits

## procedures to be followed to target the Academic Advising

1 . Been the formation of committees of faculty members to receive the new students and explaining the operation of the Department and College
2 . Distribution of all students on academic counselors so that there is a academic guid for each student and a maximum of 10 students per guide if possible.
3 . Appoint and announce office hours for each faculty member on their offices so that part of it is dedicated to academic counseling and the other part to help the students in the educational process .

4 . The availability of complete information about the department, its members, ways to contact them and announced bulletin board section .
5 . Communicate with the head / coordinator of the department in the event of problems or difficulties in the educational process
6 . Put a fund to receive student complaints deal with head / coordinator of the department in secret

## - The student grievance procedures and the mechanism used

According to the list of Higher Education

## 7 - program evaluation and improvement process

## Tenth :Approve of the program (Form A)

The program will be approved at the level of the department and the college, and reviewed by the Deanship of quality and skills development through the following sample preparation for submission to the Standing Committee of the university plans

| No. | Item | Yes | N O | Notes |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Been applying for approval of a new plan or plan amendment List | $\checkmark$ |  |  |
| 2 | Formed a committee to study the proposed plan of study in . department | $\checkmark$ |  | Attachment decision to form the committee |
| 3 | Held a training workshop for faculty members in the development of plans and programs of study. | $\checkmark$ |  | Workshop was held at the Faculty of Science + attend the building plan 30-4-2012 |
| 4 | The plan was approved at the department council in the official minutes of the meeting on 12.06.1434 | $\checkmark$ |  | Attachment decision of the department council |
| 5 | The plan was approved at the college council in the official minutes of the meeting on 19.06.1434 | $\checkmark$ |  | Attachment decision of the college council |

| No. | Item | Yes | N 0 | Notes |
| :---: | :---: | :---: | :---: | :---: |
| 6 | Was adopted the National Qualifications Framework | $\checkmark$ |  | Yes, we adopt |
| 7 | Has been guided by a set of study plans modern Arab and international universities (list attached).? | $\checkmark$ |  | Qassim University, King Saud University, Princess Nora University and facility model shows how consistency |
| 8 | Has been guided by the views of the concerned subject of employers (list attached). | $\checkmark$ |  | Questionnaires Attachment |
| 9 | Was guided by international reference in the field of specialization (list attached). | $\checkmark$ |  | Harvard University finds Attachment shows how this guided |
| 10 | Students were polled in the study plan through (questionnaires, workshops, meetings, email, etc. ....) (samples attached). | $\checkmark$ |  | Questionnaires Attachment |
| 11 | Graduates were polled in the study plan through (questionnaires, workshops, meetings, email, etc. ....) (samples attached). | $\checkmark$ |  | Questionnaires Attachment |
| 12 | Been identified learning outcomes (skills, knowledge, attitudes) (to be determined at the level of the university, college, department). | $\checkmark$ |  | Attachment learning outcomes |
| 13 | The plan contains a field training course (as much as possible). | $\checkmark$ |  | There is a field training course |
| 14 | Has been intensified practical side in some courses (as possible) | $\checkmark$ |  | Yes |
| 15 | The plan was to include a program of cooperative training (as much as possible). | $\ldots$ |  | $\ldots$ |
| 16 | Attention has been developed specialized skills and increase | $\checkmark$ |  | Yes |

Majmh University - Vice President for Educational Affairs - management programs and study plans (College of Sciences in Zulfi- Department of Mathematics)

| No. | Item | Yes | N o | Notes |
| :---: | :---: | :---: | :---: | :---: |
| 17 | A model contains on the program specification | $\checkmark$ |  | Attachment model of the program specificatio n |
| 18 | A model contains on the courses specification | $\checkmark$ |  | The model is being updated according to the model of the plan amendment request |
| 19 | language teaching | $\checkmark$ |  | English |
| 20 | Summary Course Description. | $\checkmark$ |  | Model (5) for each course |
| 21 | Model is included requirements to apply the study plan | $\checkmark$ |  | Yes |
| 22 | A minimu credit hours. | $\checkmark$ |  | 120<137<144 |
| 23 | vision, mission and goals. | $\checkmark$ |  | Mentioned in the model. |
| 24 | the plan is reviewed by by specialists | $\checkmark$ |  | A copy of the decision is attached |
| 25 | Named been determined qualified graduate who gets it. | $\checkmark$ |  | Bachelor of Science in Mathematics |
| 26 | the conditions for joining the program | $\checkmark$ |  | Mentioned in the model. |
| 27 | employers have been identified that can be staffed by graduates | $\checkmark$ |  | Mentioned in the model. |
| 28 | Matrix preparation program | $\checkmark$ |  | Mentioned in the model. |
